Introduction

Who is Microsoft Word for Jabberwocky Applicants for?

This user manual is intended for anyone at UMass who is writing an essay, poem, or story for Jabberwocky. Most students have a deep familiarity with Google Workspace, but only have a basic understanding of Word, and are completely unaware of all the tools that it has to offer. This manual is created for anyone who fits that criteria!

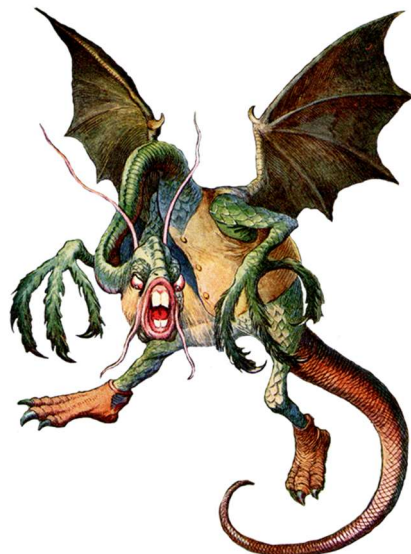

What will you learn?

Microsoft Word for Jabberwocky Applicants contains a number of modules to guide those who are creating a poem or creative nonfiction or a short story. Throughout this manual, you will find detailed instructions on the different functions you may find useful when creating your art.

In the **first section**, you will learn how to set up your document and format it before you begin writing. In the **second section**, you will find instructions on how to use different tools during the writing process. The **third section** is aimed at poets as it details different ways to format your poem. In the **fourth section**, you will learn how to use different tools in Word in order to help you in the editing process.

Why use Microsoft Word?

Jabberwocky uses Microsoft Office and Adobe InDesign in order to create the journal. When you submit something as a PDF having created it in Google Docs, the format you created may not stay the same. However, if you use Microsoft Word to create your piece and submit it to Jabberwocky as a docx, your formatting will stay exactly as you intended. Switching from Google to Microsoft may seem daunting, but this manual will help with the transition and help you take full advantage of all of the tools that Word has to offer!

Chapter 1: Getting Started

In this chapter, you will learn how to:

- Change your document's orientation
- Customize autocorrect
- Format your text into two columns

1.1 Changing the document's orientation

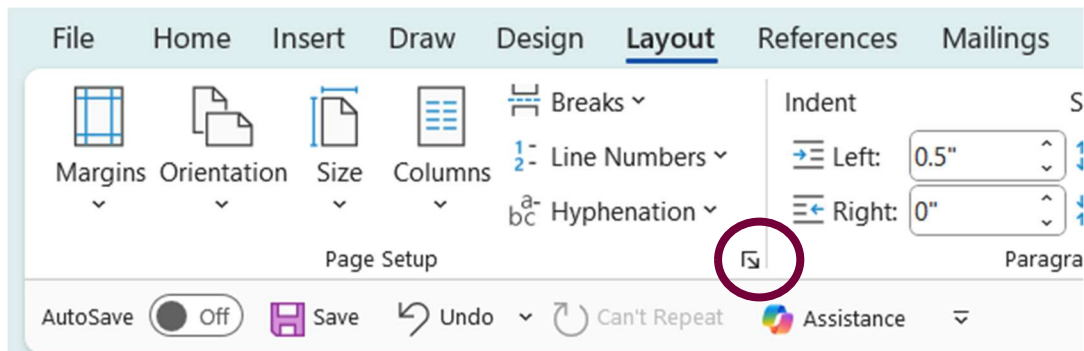

The pages of Jabberwocky are a lot shorter than your standard 8.5x11 document you write on while in Word. When writing a poem, you may want your page to better represent what it will look like and how long it will be in print. One way of doing this is to change your document from portrait to landscape.

Change the orientation for the entire document

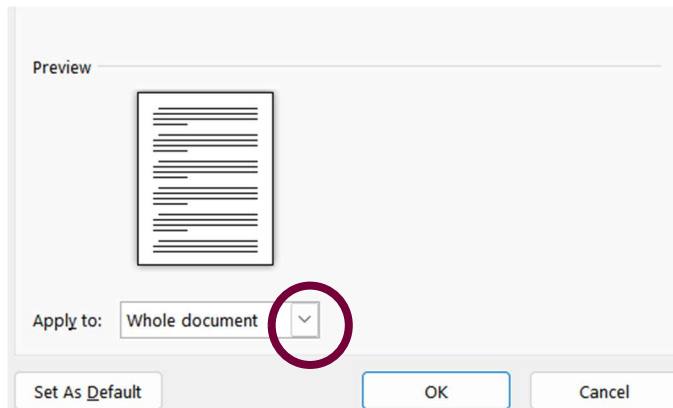

1. Click the **Layout** tab on the ribbon, the menu at the top of the document.
2. Click **Orientation**, the second option from the left of the page.
3. Click **Portrait** or **Landscape**, depending on your preference.

Change the orientation for only one page

1. Select all the content on the page and then click the **Layout** tab in the ribbon.
2. Click the **Page Setup dialog box** launcher, the small arrow at the bottom left hand corner of the Page Setup box. A dialog box appears on your page.

3. Click **Portrait** or **Landscape**, depending on your preference.
4. Click the **arrow** next to the Apply to box at the bottom of the window.

5. Click **Selected text**. Your selected page now changes orientation.

1.2 Customizing autocorrect

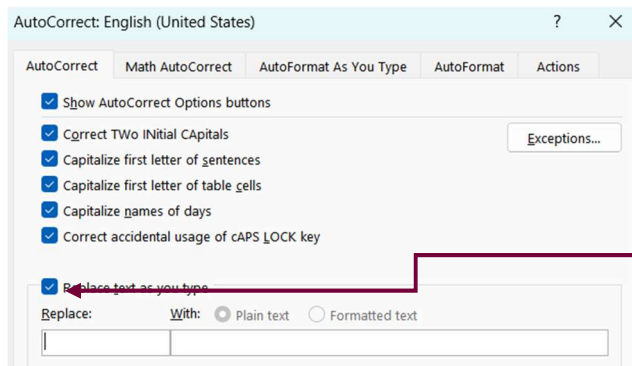

While writing your story, essay, or poem, you may run into the issue if you are using a word that Word desperately wants to autocorrect. In this case, you can use the customizing autocorrect feature, so Word recognizes it and stops trying to change what you are attempting to write. You will have two options on how to customize autocorrect.

Setting up the autocorrect function

1. Click **File** and then click **Options** from the bottom of the menu on the left side of the screen. This launches a dialog box in your document.
2. Click **Proofing** from the menu on the left side of the dialog box.
3. Click the **Autocorrect Options** button at the top of the dialog box.

Stop Word from autocorrecting completely

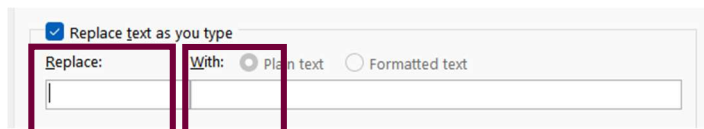

1. Click the **blue checkmark** next to the Replace text as you type button.

2. Click **OK** at the bottom of window and continue writing your piece for Jabberwocky. Word now stops autocorrecting anything that you type.

Stop Word from autocorrecting a specific word

1. Type the word that Word keeps changing your word to into the **Replace** box.

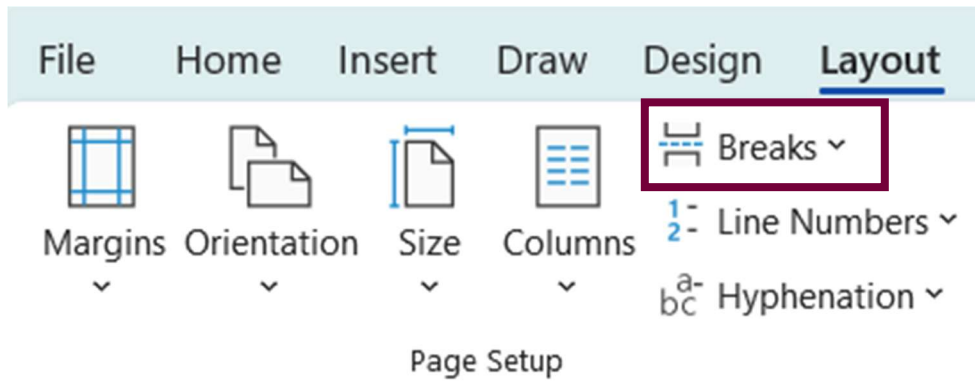

2. Type the word that you are trying to write into the **With** box.
3. Click **add** and then click **OK** at the bottom of the window. You can now keep writing your piece for Jabberwocky without Word trying to autocorrect your unique word.

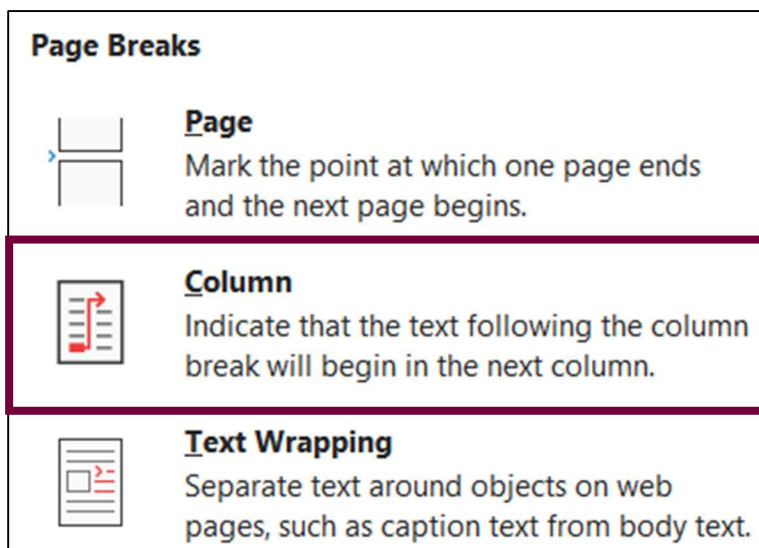

1.3 Formatting text in two columns

If you are writing your poetry in landscape mode, you may want to fit more than one poem on a page. Or maybe you just want your poem in two columns while it's in portrait mode. Either way, one way to do this is to format your text into two columns, so you can have one poem on one half of the page with another poem on the other half.

1. Highlight the text that you would like to put into two columns.
2. Click the **Layout** tab at the top of your page.
3. Click **Columns**, and then click **Two**. This moves all your selected text to the left side of the page and all into one column.
4. Move your cursor to the front of the text that you would like to move to the second column.
5. Click **Breaks** in the Page Setup section of the Layouts tab. A dropdown menu appears.

6. Click **Column**. This moves all the text following your cursor to the second column.

Chapter 2: Tools During the Writing Process

In this chapter, you will learn how to:

- Use the thesaurus function
- Insert symbols into your document
- Create footnotes
- Use Format Painter

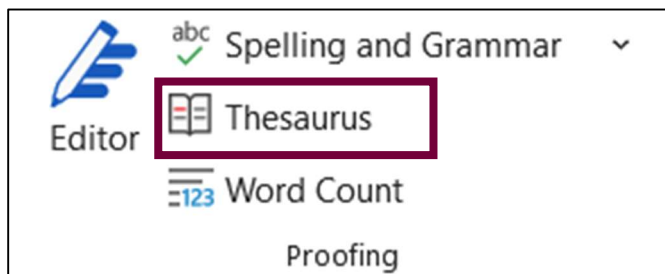

2.1 Using the thesaurus

While you are writing your piece for Jabberwocky, you may find yourself accidentally reusing the same word repeatedly or you are trying to think of a new word to use. Instead of having to switch windows and look up a thesaurus, you can take advantage of the built in thesaurus feature that Word offers.

Opening the thesaurus

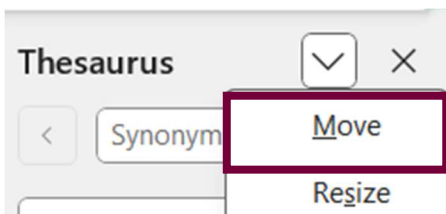

1. Click the **Review** tab on the ribbon.
2. Click **Thesaurus** in the Proofing group on the right of the menu. A thesaurus feature pops up on the left side of the document.

3. Type the word that you would like to look up in the search bar at the top and click **Search Thesaurus**. A list of synonyms appears below the search bar.
4. Click on any of the listed synonyms and the thesaurus switches to show you synonyms for that new word.

Move the thesaurus

1. Click the **carrot** at the top right-hand corner of the thesaurus feature. A drop-down menu appears.

2. Click **Move** and move your cursor to wherever you would like to move the thesaurus. Click once to release it

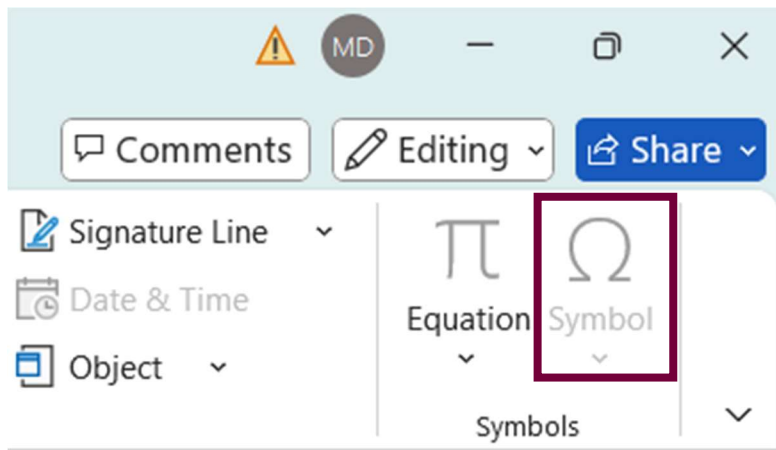

Change the size of the thesaurus

1. Click the **carrot** at the top right-hand corner of the thesaurus feature. A drop-down menu appears.
2. Click **Resize** and move your cursor to resize the thesaurus to your preferred size.

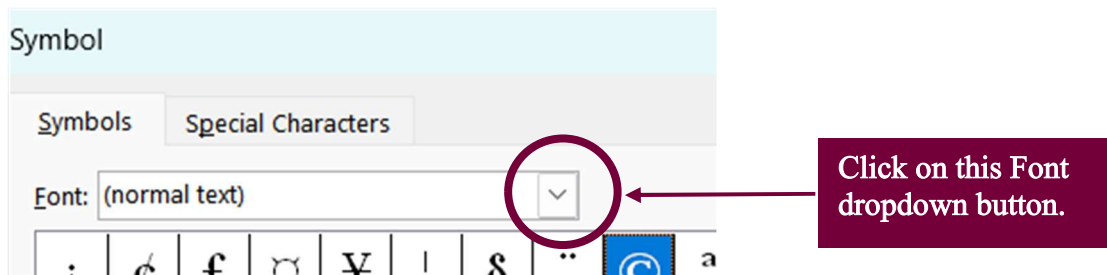

2.2 Inserting symbols into your document

While writing your essay, short story, or poem, you may run into the problem of wanting to use a symbol that isn't available on your keyboard, but do not worry. In Word, you can use the symbols tool to insert any symbol not readily available through your keyboard.

1. Put your cursor in the place where you would like to put the symbol in your document.
2. Click the **Insert** tab in the ribbon at the top of the document.
3. Click the **Symbol** button on the left-hand side of the menu. A drop-down menu will appear.

4. Click **More Symbols** at the bottom of the menu. A dialog box launches on your screen.
5. Click the **Font dropdown** button to choose the font that you are currently working with.

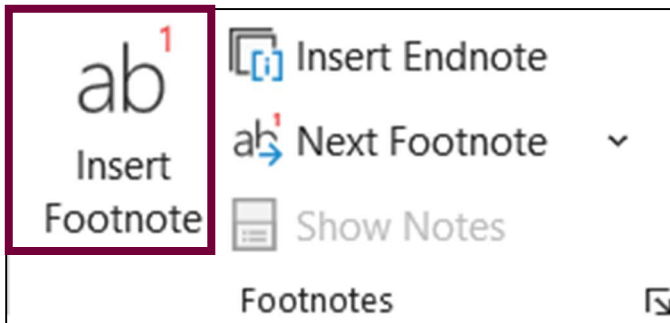

6. Find the symbol that you are looking for and click **Insert**. The symbol appears where you left your cursor in the document.
7. Click **Close** to return back to your document and keep typing your piece.

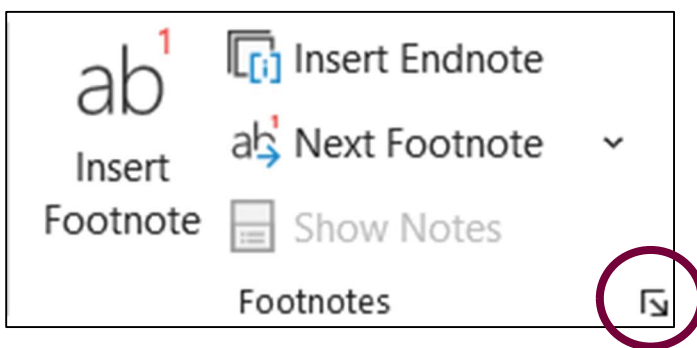

2.3 Creating footnotes

While you are writing your essay, you may have to add information regarding a citation or provide supplementary information, but you don't want to disrupt the flow of your writing. This is when inserting a footnote at the bottom of the page comes in handy and Word offers a tool to help you in inserting them.

1. Insert your mouse where you would like to add the footnote reference number.
2. Click the **References** tab in the ribbon at the top of the document.
3. Click **Insert Footnote** in the **Footnotes** section. Word will insert a subscript where your mouse is and will automatically create a footnote section for you at the bottom of your page.

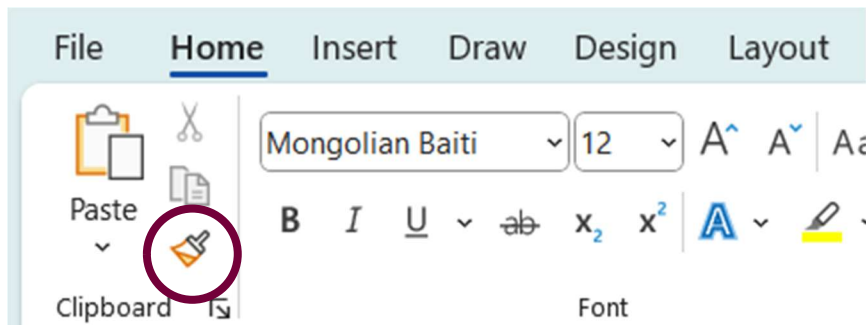

4. Type the information you must include in your footnote. Repeat steps 1-3 for every footnote you would like to include in your essay.
5. Customize your footnotes by clicking on the **Footnotes & Endnote dialog box launcher** in the bottom corner of the **Footnotes** section. A dialog box opens and you can change the location, layout, and format of the footnotes.

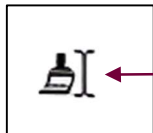

2.4 Using Format Painter

After changing the orientation of your document, formatting the text into two columns, deciding on your typeface, and making other formatting changes to your document, you may have realized that you do not want to go through this entire process with every new document. Once you have your format exactly the way you like it, you can use the Format Painter tool to copy and paste the existing format.

1. Select the text that you want to copy and paste the formatting of.
2. Click **Home** from the ribbon and click the **Format Painter** button from the **Clipboard** section. Your cursor displays a paintbrush icon when you hover over text.

3. Select the text that you would like to change the formatting of. The text changes to your chosen formatting as you release the mouse.

When you are using Format Painter, your cursor will look like this.

Tip: If you would like to apply the formatting in multiple places at once, double click on the Format Painter button. You will now be able to format as many places you would like to until you click on the Format Painter button again to stop using it.

Chapter 3: Different Poetry Styles

In this chapter, you will learn how to:

- Create concrete poetry
- Create blackout poetry
- Utilize line spacing for poetry

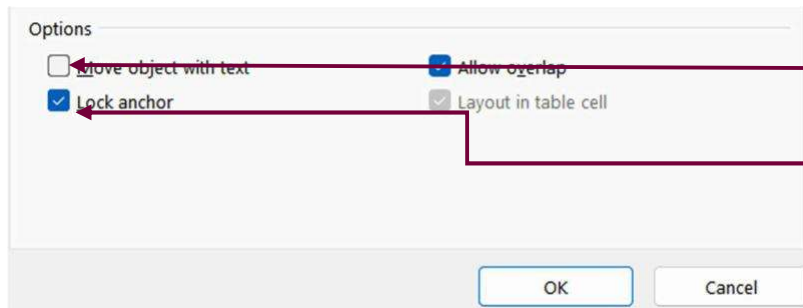

3.1 Creating concrete poetry

Concrete poetry is a form of poetry that shapes your words into an image that represents the theme of your work. It is a creative way to express your poem in a visual form, and you may want to experiment with it when writing your poem. Even though Word doesn't have a feature to create this for you, you can manipulate their features to make a concrete poem of your own.

Insert and anchor an image

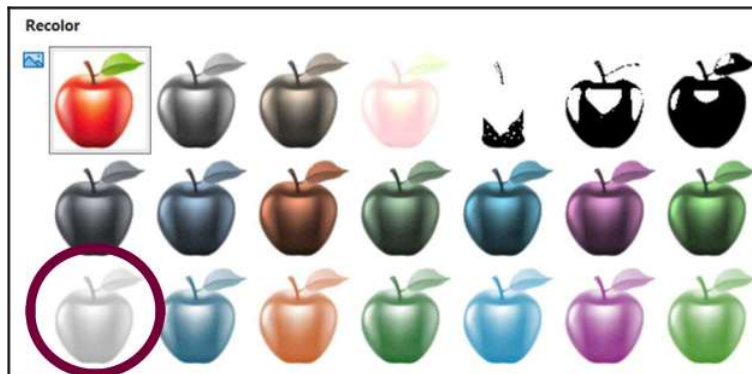

1. Click **Pictures** in the **Insert** tab in the ribbon to insert the image you would like your poem to take the shape of. For this example, I will be using the image of an apple.
2. Right click on the image and click **Wrap Text**. Then, click **Behind Text**.
3. Right click on the image again and click **Size and Position**. A dialog box appears on your screen.
4. Click on the **Position** tab at the top of the dialog box.
5. Unselect the **Move Object with Text** blue checkmark at the bottom of the dialog box and then select the **Lock Anchor** box right underneath. Select **OK**. This keeps your image from moving when you press the enter key or are trying to type.

This box should be unselected.

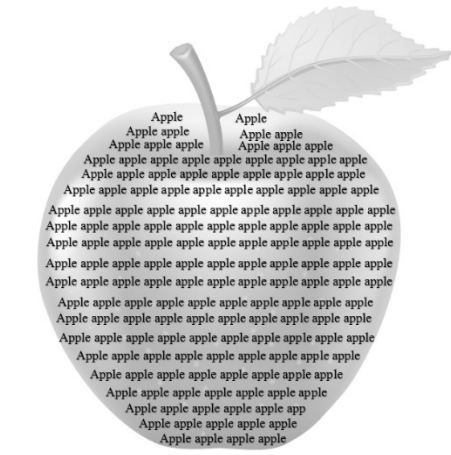

This box should be selected.

6. Click on your image and then select the **Picture Format** tab in the ribbon.
7. Click the **Color** dropdown in the **Adjust** section.
8. Select the **light grey** option in the bottom right corner. This is so you will be able to see the image while also being able to see the text you are writing on top of it.

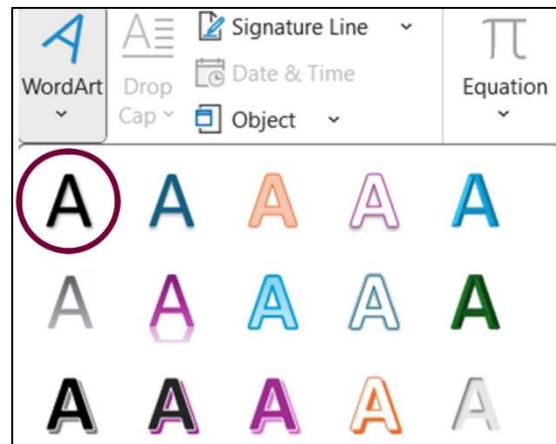

9. Click **WordArt** in the **Insert** tab in the ribbon at the top of your document. A dropdown menu appears. Select **plain text**, the first option. Adjust the size and font to your preference.
10. Continue adding WordArt text on your image for all the text you would like to include in a straight line. You can also use the circular arrow at the top of the text box if you want your text on an angle.

Once you add all the text in a straight line, it may look similar to the apple image on the right.

Shaping your words in the shape of your image

1. Click **WordArt** in the **Shape Format** tab in the ribbon at the top of your document. A dropdown menu appears. Select **plain text**, the first option. Adjust the size and font to your preference.
2. Click on the **Text Effects** button in the **WordArt Styles** section. A dropdown menu appears.
3. Click on **Transform** and then click on whichever shape that best suits your shape. You can also use the circular arrow at the top of the text box to rotate the text box.

Once you have finished setting up the text to resemble the image, delete the image behind your text. You have now created your own concrete poem, and it may look similar to the apple on the right.

3.2 Creating blackout poetry

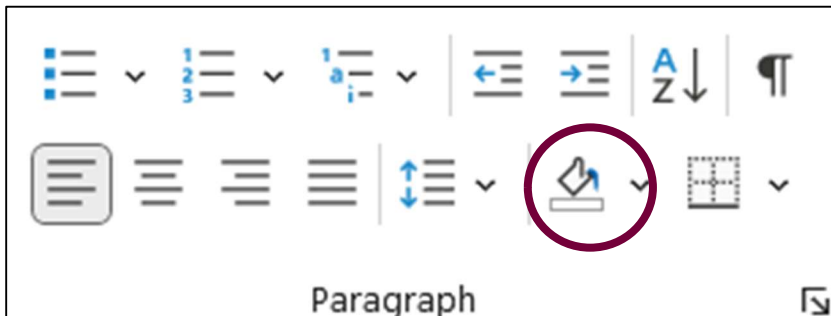

Another creative form of poetry is blackout poetry. This is when you take an existing piece of text and black out words of it to create your own poem and to give the piece an entirely new meaning. You can use different features of Word in order to make the poem directly into a document.

Setting up the document

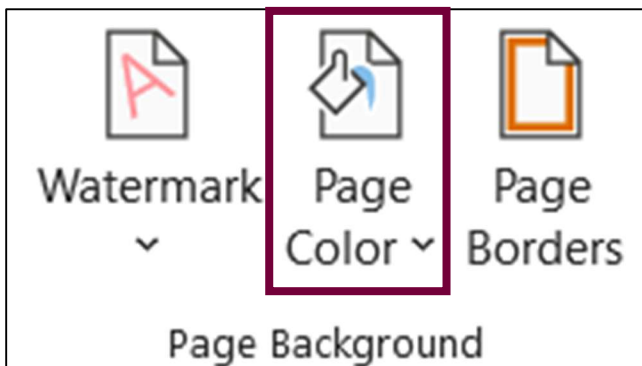

1. Paste existing text into your blank document.
2. Arrange the text in any way you prefer, preferably on one page.
3. Read through the text and choose the words that you would like to keep for your poem.

Blacking out the page

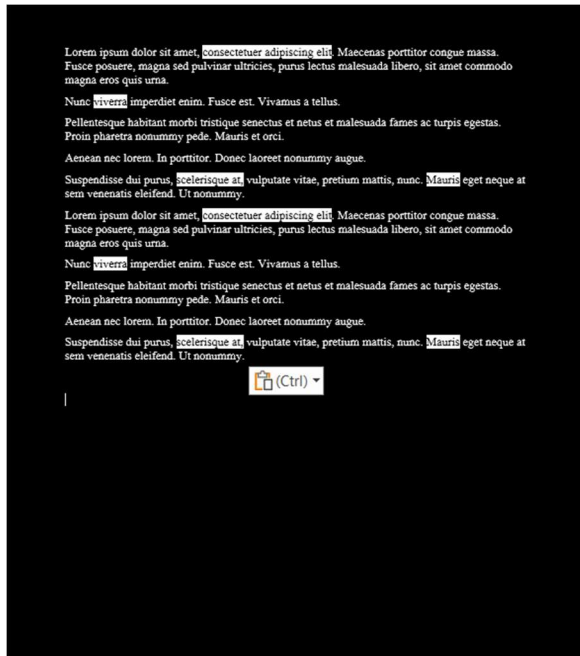

1. Select the first piece of text that you would like to keep visible
2. Click **Home** in the ribbon at the top of your document and select the **Shading drop down** from the **Paragraph section**. Click **white**.

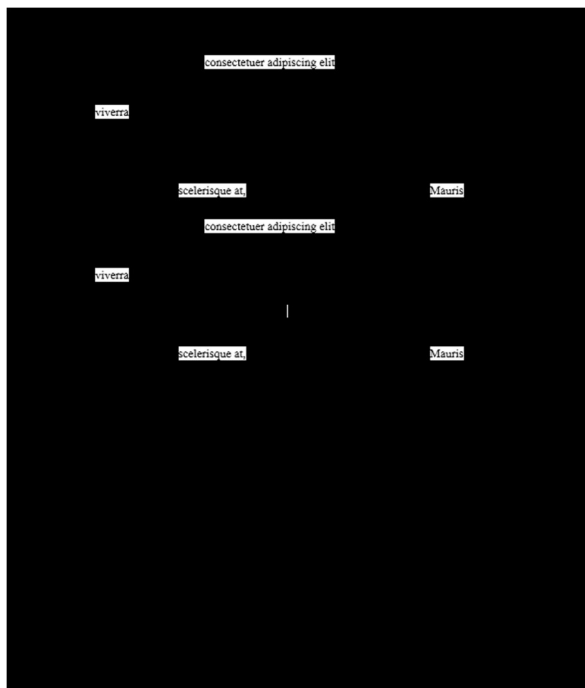

3. Continue shading all the text that you wish to include in your poem.
4. Click **Design** in the ribbon at the top of your document and select **Page Color** in the **Page Background** section.

- Click **Black** and your entire document will change to black and the only text that should be visible is your shaded text.

Troubleshooting: If you change your document to black and you find all your text changing to white and it is still visible, select the text and change the font color to black. This will ensure that the only visible text is the text that you shaded.

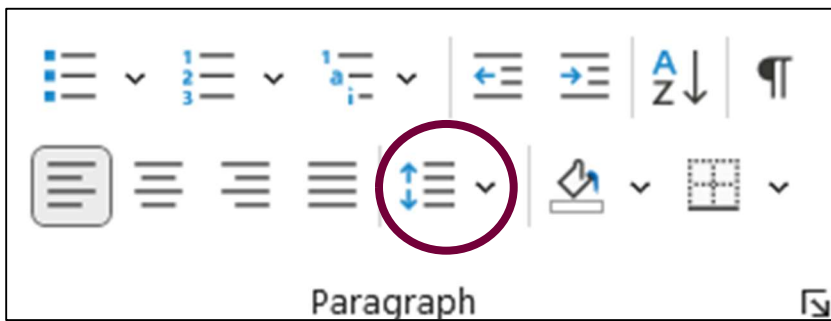

Your final product will look similar to the example on the left.

3.3 Utilizing line spacing

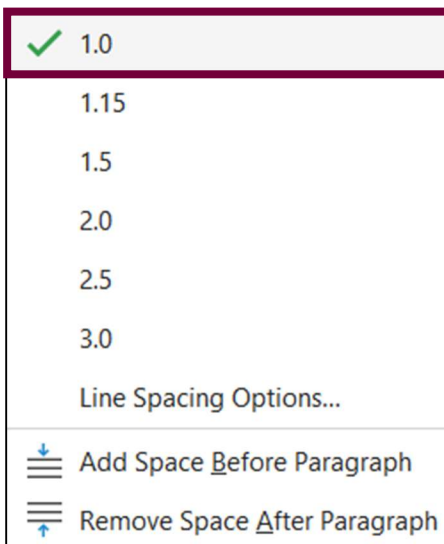

In poetry, the standard spacing between lines within a stanza is single spacing, while the standard spacing between stanzas is double spacing. This module will detail how to adjust the spacing within your poem when you are dealing with different spacing throughout the document.

Single spacing within a stanza

1. After you have finished writing your poem, select all the lines within your stanza.
2. Click the **Home** tab from the ribbon at the top of your document.
3. Click the **Line and Paragraph spacing dropdown** and click **Remove Space After Paragraph**. Every time you click enter in Word, it automatically adds extra space between every line. By clicking on Remove Space After Paragraph, you are getting rid of that.

4. Click **1.0**. This will adjust the lines in your stanza to single spacing.

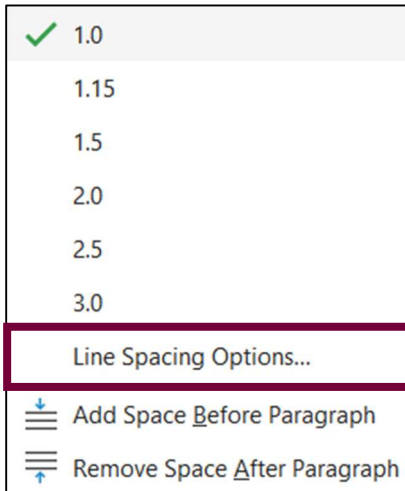

5. Repeat steps 1-4 for however many stanzas are in your poem

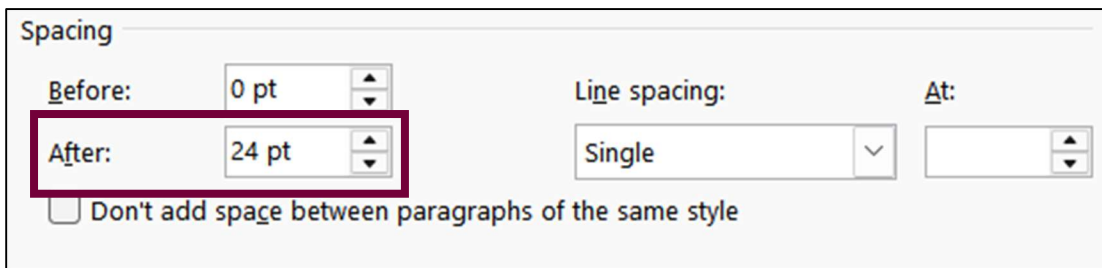

Double spacing between stanzas

1. Place your cursor in the last line of one of your stanzas.

2. Click the **Line and Paragraph spacing drop down** from the **Paragraph** section in the **Home** tab.
3. Click **Line Spacing Options**. A dialog box opens.

4. In the **Spacing** section, change the number in the **After** box to double the point size of your font. For example, if you are typing in 12-point font, change the After box to 24-points.

5. Click **OK** at the bottom of the dialog box. Repeat steps 1-4 for each stanza.

Chapter 4: Finishing and Editing Your Work

In this chapter, you will learn how to:

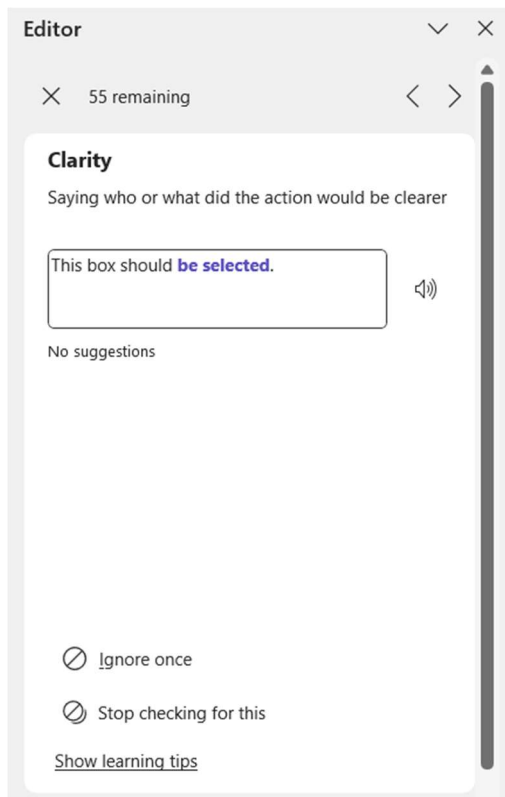

- Use spelling and grammar check
- Track changes while editing
- Create a bibliography
- Create hanging indentations
- Use the read aloud tool

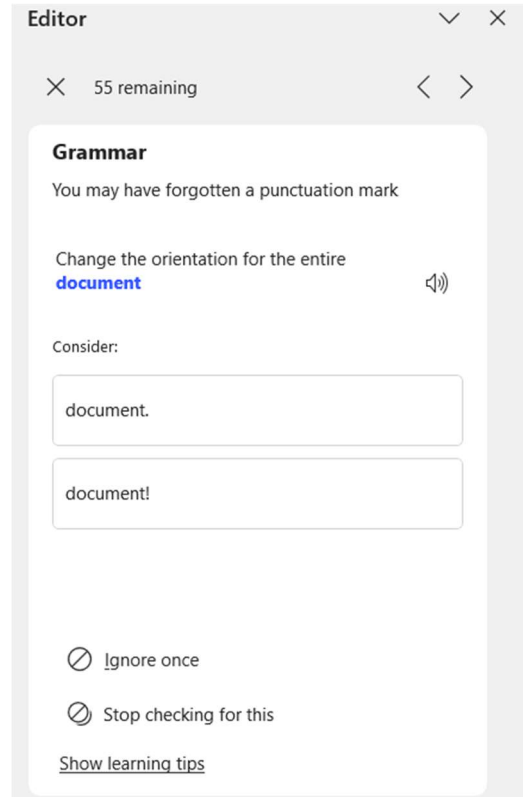

4.1 Using spelling and grammar check

Once you have finished drafting your poem or essay, you will most likely have to read through your work and edit it. During the writing process, you may have made a spelling or grammar mistake that you did not catch at the time. You can use the spelling and grammar check tool that Word offers to help you catch any mistakes.

1. Click the **Review** tab on the ribbon at the top of your document.
2. Click the **Spelling and Grammar dropdown** from the **Proofing section** and then click **Spelling and Grammar**. An editor feature pops up on the side of the document.
3. Click **Editor Score** to navigate to the first grammar or spelling error that Word has caught for you.
4. You can now go through each recommendation by accepting its change or choosing **Ignore once** or **Stop checking for this**, based on your preference.

In this example, Word offers no replacement but instead suggests a way for me to make my writing clearer. If I don't agree with their suggestion, I can click Ignore once to reject it just this once or Stop checking this if I wasn't Word to completely stop with this suggestion.

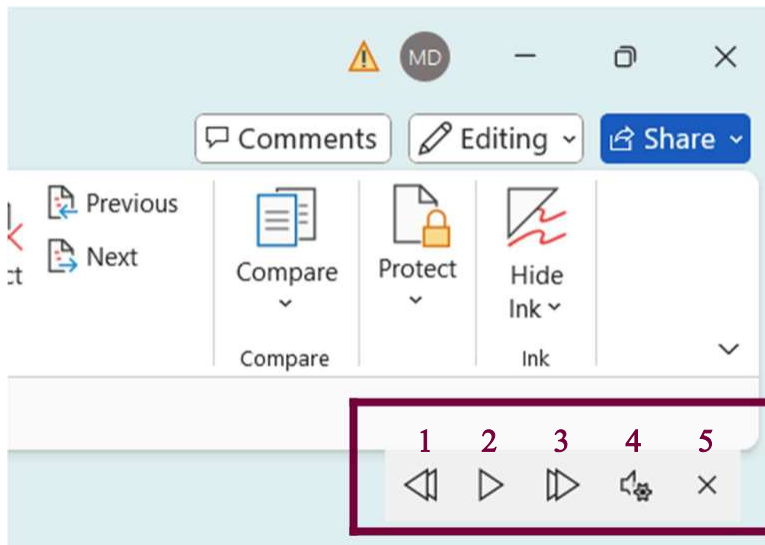

In this example, Word offers suggestions to add a punctuation mark at the end of my sentence. If I do not agree with their suggestion, I can click Ignore once to reject it just this once or Stop checking this if I wasn't Word to completely stop with this suggestion.

4.2 Using the read aloud tool

Reviewing your piece that you want to submit can be a solitary process. Reading what you wrote down in your head repeatedly may not be the most effective way of catching your mistakes or anything that doesn't sound quite right. Word offers a tool that will read your work out loud so you can review your work and catch anything that doesn't sound the way that you intended.

1. Click **Review** on the ribbon on the top of your document.
2. Click **Read Aloud** from the **Speech** section. A control panel will appear in the corner of your document.
3. Place your cursor where you would like the computer to start reading from and click **Play**. Your computer will start reading your work.
4. When you are ready to stop using the tool, click **Stop**, the button all the way to the right of the control panel, to get rid of it.

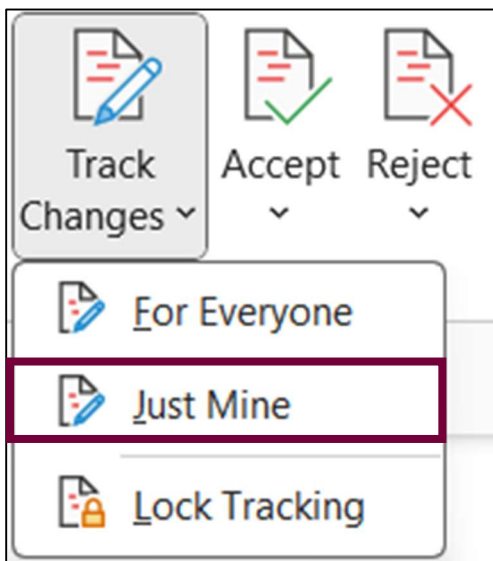

- 1: Previous button. Click if you would like to return to the previous section.
- 2: Play button. Click to begin reading or to stop reading.
- 3: Next button. Click if you would like to skip to the next section.
- 4: Settings button. Click if you would like to change the reading speed or if you want to change the voice of the speaker.
- 5: Stop button. Click to get rid of the read aloud tool.

4.3 Track changes while editing

Once you are done writing, you may choose to have someone look over your piece to make sure that it is nice and polished. Someone reviewing your work may want to make small changes or fix your grammar while they are reading, but you don't want to make any of their changes permanent right away. Word has a feature that allows your reader to suggest changes for you to go over later.

Someone reviewing your work on your own device

1. Click **Review** from the ribbon at the top of the document.
2. Click the **Track Changes** button from the **Tracking** section and click **Just Mine**.

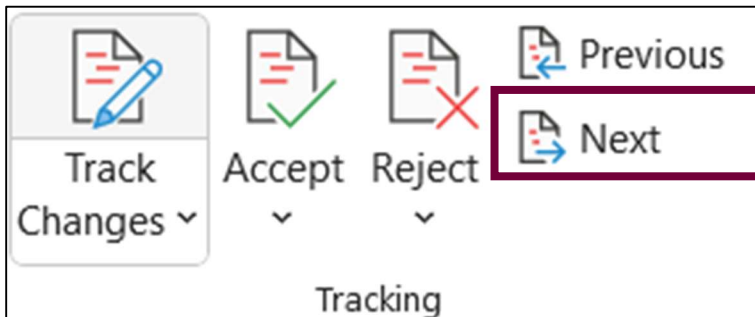

3. Give your device to whoever is reviewing your work. Anything they add will show up in red underline and anything they delete will be a red strikethrough.
4. Once they are done, click the **Track Changes** button. You can now type and change anything in your document as usual.

Accepting the suggestions made to your work

1. Click **Review** from the ribbon at the top of your document.
2. To keep the suggestion made to your document, click **Accept**. The first suggestion made in your document is highlighted.

3. Click **Accept** again to accept the change and click **Next** to move to the next suggestion.
4. If you want to skip a suggestion, click **Next** to move past it without finalizing the change or click **Previous** to return to a previous markup. Continue doing this until you have finished going through all your accepted changes.

Rejecting the suggestions made to your work

1. Click **Review** from the ribbon at the top of your document.
2. Once you have decided to get rid of the suggestion made to your document, click **Reject**. This will highlight the first suggestion made to your document.
3. Click **Reject** again to accept the change and click **Next** to move to the next suggestion.
4. If you want to skip a suggestion, click **Next** to move past it without finalizing the change. Continue doing this until you have finished going through all your rejected changes.

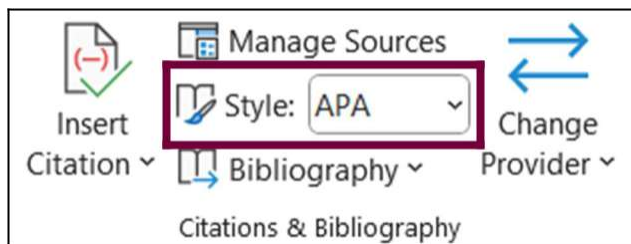

4.4 Creating a bibliography

If you are writing an essay for the journal or any other piece of work that uses outside sources, you must cite them via a bibliography at the end. If you are writing an analysis piece about a movie or novel or stating any information that you did not already know, you must give them credit. Instead of having to manually create your bibliography, you can use a tool to help you in creating one.

*Note: It is important to begin the bibliography by creating the in-text citations. You will be providing Word with all the information it needs to then set up the bibliography for you later.

Creating in-text citations

1. Click **References** from the ribbon on the top of your document.
2. Choose which style (APA, MLA, Chicago, et cetera) you would like to use for your citations from the **dropdown menu** in the **Citations & Bibliography** section. It will default to APA.

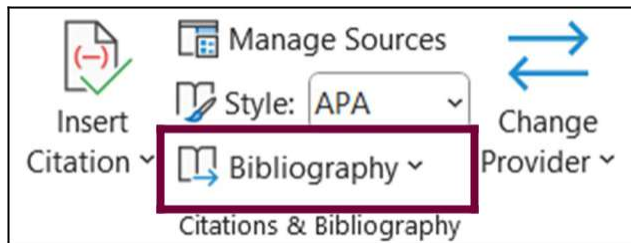

3. Place your cursor where you would like the citation to be placed in your document.
4. Click **Insert Citation** and then click **Add New Source** from the dropdown. A dialog box appears on your screen.
5. Choose which type of source you are citing from the drop-down menu at the top of dialog box. You can now fill out the rest of the information based on whatever you are citing.

6. Click **OK**. The in-text citation appears in your document. Word auto-formatted the citation to match your selected style.

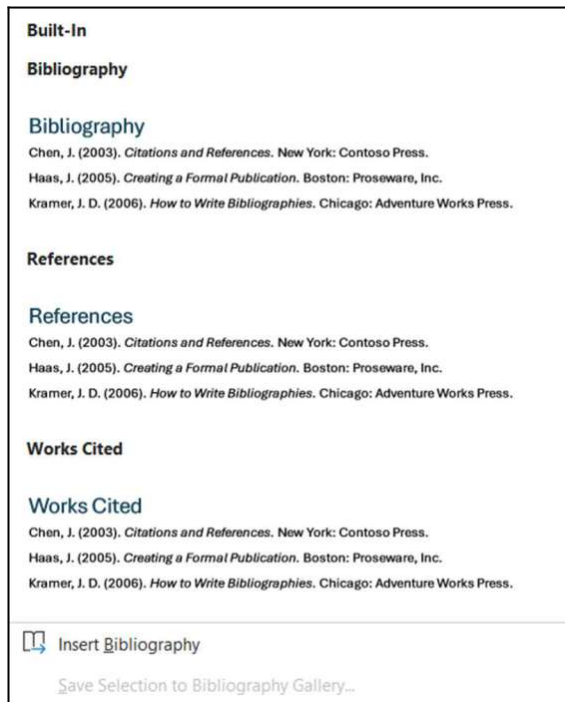

Continue doing this for however many in-text citations you need to insert in your document.

Creating the bibliography

1. Place your cursor where you would like the bibliography to be placed.
2. Click **References** from the ribbon on the top of your document.
3. Click **Bibliography** from the **Citation & Bibliography** section. A dropdown menu appears.

4. Click whichever bibliography option best suits your document. A bibliography is inserted where you placed your cursor.

You can click on the **Bibliography**, **References**, or **Works Cited** option. Any of them will insert a bibliography with all the citations your previously created.

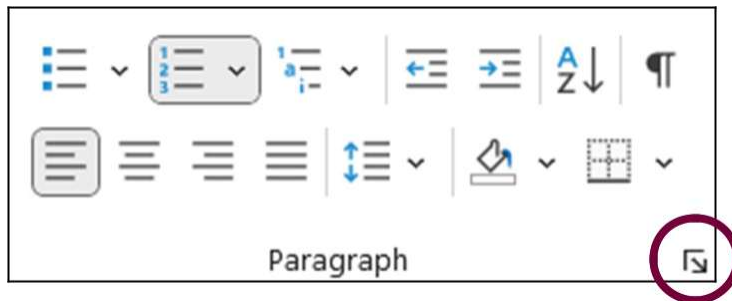

5. Once inserted, you can change the typeface and design to match your formatting.

You now have a complete bibliography in your document without having to format it manually.

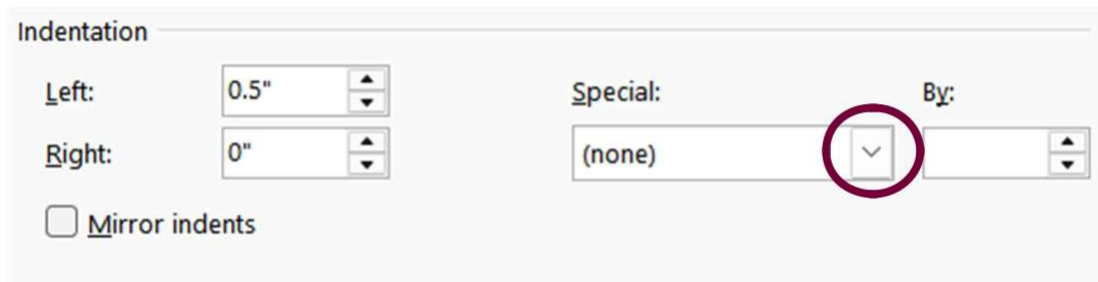

4.5 Creating hanging indentations

A hanging indentation is a formatting style where the first line is at the margin while the following lines are indented. Using this formatting tool is helpful when creating a bibliography or maybe if you have a specific format style for your poetry.

1. Select the text that you would like to format.
2. Click on **Home** on the ribbon at the top of the document.
3. Click the **Paragraph Settings dialog box launcher** in the bottom left hand corner of the **Paragraph** section. A dialog box opens.

4. Click the **Special dropdown arrow** in the indentation section of the dialog box.

5. Click **Hanging** and then click **OK**. Your selected text will now have a hanging indentation.
